RX Honing “Sharpening” Machine

Tired of having a drawer full of dull instruments?? Are surgeries taking you longer than they should?? Always buying new instruments?? Step up to the RX Honing Machine. Used in hospitals, dental offices, and veterinary clinics for over 39 years. Makes old instruments like new in seconds and keeps them sharp. Saves time, money and is easy to use.

- Properly sharpen Elevators, Luxators, Scissors, Perio Elevators, Bone Rasps, OH Needle Holders, Curettes, Scalers and much more!!
- Pays for itself (over & over) vs. cost of buying new instruments
- Includes instructional book and DVD/CD ROM
- Backed by a 2 Year warranty and great customer service

$695.95

Sharpening Files (Diamond Coated)

- Conical files - excellent for sharpening instruments such as scissors, and knives.
- Durable plastic handles fold to protect diamond surface.

1927. X-fine (green) maintain ultimate edge............................................. $25.95
1928. Fine (red) general sharpening and edge reconditioning.....................$25.95
1929. Coarse (blue) restore severely worn edges.......................................$25.95

Sharpening File Set

- Four piece Swiss pattern needle file Set, consisting of flat, round and triangular files and a knurled aluminum handle.
- Useful for sharpening instruments, such as scissors and knives.

$7.95

Sharpening Stones

- Needed for sharpening scalers & curettes.
- Ceramic stone (3 x 1 3/8 x 1/4") does not require oil.
- Arkansas cone stone useful for concave surface of curettes.

149. Ceramic sharpening stone (ceramic oil free)......................................$21.95
150. Arkansas cone sharpening stone.........................................................$21.95
3287. Medium India Slip Stone 4 1/2” x 1 3/4”...........................................$11.95
STS. Plastic test stick (package of 6).........................................................$15.00
SIO. Sharpening oil 1 oz.................................................................$12.50

Sharpening Kit

Contains Arkansas cone sharpening stone, Medium India Slip Stone, 1 oz. bottle of oil, 6 plastic test sticks and sharpening guide.

INSTRUMENTS
**NO MORE SHARPENING WITH XP TECHNOLOGY™**
The next evolution in instrument design and usage. Finally, a solution to the most common problem associated with the use of hand instruments. Completely eliminates the time-consuming and imperfect process of re-sharpening. These instruments are designed to last months without the need to resharpen by maintaining their factory shape throughout the useful life of the instrument. When they eventually become dull, simply replace them.

XP Technology is a patented state-of-the-art surface engineering technology process in which titanium nitride in infused into the substrate. The result is a super hard surface that produces razor-sharp edges on thinner blades that start sharp and stay sharp. This makes these instruments the most durable on the market with over 100 times greater wear resistance over any carbon or stainless steel instruments available.

- Thinnest blades in the industry allows for easier access into periodontal pockets and interproximal areas. Rounded opposing edge reduces tissue trauma.
- More comfort and less fatigue. Only a slight amount of pressure is needed to lightly plane away calculus and tartar requiring a much lighter grasp.
- Save time & money. Outlasts any standard curette and eliminates the need for sharpening.

Important Note: Once an XP instrument becomes dull, it is the manufacturer’s recommendation that the instrument be discarded. Using a dull instrument can lead to breakage. Use of a test stick to determine sharpness is advised. Using a dull XP instrument and sharpening can damage the instrument and will void the manufacturer’s warranty/guarantee.

Although XP instruments can be cleaned and sterilized as any stainless steel instrument, the following suggestions will add longevity and increased performance to these instruments.

**Technique**
- Practice care as these instruments have a sharper edge on a thinner blade.
- Lightly scale away calculus with 4-6 strokes.
- Avoid use on margins, overhangs, amalgam, composite and fracturing away calculus.

**Care**
- Do use cassettes for cleaning and storage.
- Do periodically test for sharpness with an AEI test stick.
- Do thoroughly dry before storing.

**Cleaning/Sterilization**
- Do promptly place instruments in ultrasonic cleaner.
  - Standard recommended cleaning cycle is 20 minutes
- Do separate XP Technology™ instruments from all other instruments when cleaning/sterilizing. Recommend not combining dissimilar metals.
- Do use PH balanced cleaners.
- Do always rinse with demineralized water after ultrasonic cleaning.
- Do dry instruments before sterilization.
- Avoid use of Chlorine, Chloride, NaCl (Sodium Chloride), and Fluoride based solutions.
- Do use autoclave sterilization and strictly follow unit manufacturer’s recommendations.
- Do allow for complete drying cycle.

**Sharpen Free Double Gracey Currettes**
Combines the best features of Gracey and Universal curettes with rounded toes and two cutting edges. Fine, sharp smooth edges are designed for subgingival scaling and more efficient root planing. Allows for easy adaptation without repositioning or switching instruments. Use with a lighter grasp without applying excess pressure. Mini versions allow easier access into deeper pockets, tighter interproximal areas and furcations. Avoid using them to trim margins and remove overhangs by “breaking away” difficult calculus. All are sharpen-free technology with plastic 3/8” x 9.5mm handles and can be cleaned and sterilized like any stainless steel curette.

### SCALERS

#### Canine Prophylaxis Kit

**PROPHYKIT. Prophylaxis Kit complete** $329.95

### Feline Prophylaxis Kit

**PROPHYKITF. Prophylaxis Kit Feline only** $199.95

#### Periodontal Scaling Kit
- Complete Kit for dogs & cats.
- Contains: 1 Periodontal probe, 3mm markings.
- 1 Feline/canine fine dental explorer #6/17.
- 1 Shipp Micro-scaler/curette Kit.
- 2 Mini Langer-Pattison curettes #1/2 & #5/6.
- 2 Mini extended Gracey curettes #1/2 & #13/14.
- 1 Autoclavable cassette.

**137. Periodontal scaling Kit, feline & canine (blue cassette)** $17.95

#### Calculus Removers
- The calculus remover is designed to remove heavy deposits of calculus from the teeth.
- This saves time and wear and tear on scaling instruments, and is more effective than extraction forceps.

PREMIUM DENTAL ELEVATORS

Shipp’s Dental by Cislak
Wiggs Winged Elevators

Hold the elevator down on the shaft to prevent slippage and cradle the jaw with the opposite hand, especially with bone structure of questionable stability that could fracture. Use steady gentle rotational pressure for 10 to 30 seconds to fatigue the periodontal ligament and cause hemorrhage among its fibers. As space allows, press further apically along the tooth using a slow twisting action. Once the tooth becomes loose, press the bottom of the alveolus to remove the tooth. Excess force should not be necessary if correct technique is used. Should not be used in a prying motion since their function is to sever the ligament by sliding around the root.

Available in 3 tip variations including original straight, back bent for better buccal access, and inside bent for better palatal access. All tips available in a standard 4” handle with a 5 1/2” overall length and with a short shank (XS) in the #503 handle with a 4 ¾” overall length. Short handles work easier for smaller hands and in smaller working areas.

**Original Straight Tip**

Pointed Elevator helpful with large tip roots
Standard Handle 4” with 6” overall length

301W Small Chisel Edge Elevator 3mm.................................$47.95
ECONOMY DENTAL ELEVATORS

Dental elevator tips are delicate and undue force may break them. Push the tip of the elevator into the socket at different points around the tooth to sever the periodontal ligament. Do not attempt to lever the tooth out of the socket with elevator. Sharpen after every use.

Wing Tipped

• Veterinary elevators designed by Dr. Robert Wiggs.
• Short winged blades with lateral edges which curve upward farther than traditional elevators, improving conformation to the root structure, as well as instrument control.
• Narrow neck enhances visibility of the root.
• Includes color coded size rings
• Shorter 3" handles (SH) improves handling and control, especially for smaller hands.

Modified tips
1335. Winged elevator - 1.5mm Modified tip (#1) (Wh/Yellow).............. $22.95

Curved Elevators - Fahrenkrug
(Contoured tips for curved roots of incisors and canine teeth.)

• Indispensable elevators for extracting curved-rooted teeth (i.e. canine teeth and incisors).
• The curved tips are designed to follow the concave and convex curvatures of the roots, helping to prevent breaking the roots.
• The tips have a horizontal concavity ground into them. This helps guide the tip into the socket, thus preventing it from slipping out and causing damage to the gingiva.

Regular Tips
630. Fahrenkrug elevator - 2mm Regular tip (Cat) (Red)................ $19.95
631. Fahrenkrug elevator - 3mm Regular tip (Dog) (Blue)............. $19.95
1080. Fahrenkrug elevator - 4mm Regular tip (Dog) (Green)....... $19.95
1081. Fahrenkrug elevator - Set of 3 (2, 3 & 4mm Regular tip)..... $52.95

Modified Tips
1082. Fahrenkrug elevator - 2mm Modified tip (Cat) (W/Red)........ $26.95
1083. Fahrenkrug elevator - 3mm Modified tip (Dog) (W/Blue)...... $26.95
1084. Fahrenkrug elevator - 4mm Modified tip (Dog) (W/Green).... $26.95
1086. Fahrenkrug elevator - Set of 3 (2, 3 & 4mm Modified tip).... $73.95

Straight Tipped

• Includes color coded size rings
• Shorter 3" handles (SH) improves handling and control, especially for smaller hands.

Modified Tips
1223. Elevator - 1mm Modified tip (White/Yellow).................... $14.95
1223SH. Elevator 3" handle - 1mm Modified tip (White/Yellow).... $14.95
157. Elevator - 2mm Modified tip (White/Red)......................... $14.95
157SH. Elevator 3" handle - 2mm Modified tip (White/Red)....... $14.95
537. Elevator - 3mm Modified tip (White/Blue)....................... $14.95
537SH. Elevator 3" handle - 3mm Modified tip (White/Blue)..... $14.95
539. Elevator - 4mm Modified tip (White/Green)................. $14.95
539SH. Elevator 3" handle - 4mm Modified tip (White/Green).... $14.95
541. Elevator - 5mm Modified tip (White/Black)................... $14.95
541SH. Elevator 3" handle - 5mm Modified tip (White/Black).... $14.95
1363. Elevator - Set of 5 (1-5mm Modified tips)..................... $66.00
1363SH. Elevator 3" handle - Set of 5 (1-5mm Regular tips)..... $66.00
PREMIUM LUXATING ELEVATORS

Luxating Type Elevators
Made with a thinner sharper blade to ease extraction. Use in a circular motion to cut periodontal ligament and separate tooth from surrounding bone. Should not be used in a prying motion since their function is to sever the ligament. Available in a standard 4” handle with a 6 1/4” overall length, and with a short Shank (XS) in the #503 handle with a 5” overall length.

Standard Handle 4” with a 6 1/4 Overall Length

# EXTRACTION INSTRUMENTS

## Extraction Forceps

These small extraction forceps are excellent for grasping small teeth (especially in cats). All have spring action for easy manipulation.

- Beak tips are flat and close completely.
- Length approximately 5”.

<table>
<thead>
<tr>
<th>Item</th>
<th>Description</th>
<th>Price</th>

<td>Extraction forceps, small, Kit (C1, C2, C3, C4) (satin)</td>
<td>$79.95</td>
</tr>
</tbody>
</table>

- Beak tips have concave groove and a slight reverse bevel for grasping roots.
- Beak tips close to 1 mm.
- Excellent for caudal and canine teeth.
- Length approximately 4 1/2”.

<table>

</tbody>
</table>

## ExtractEze Root Tip Remover

Finger instrument that allows quick and easy removal of root tips without causing trauma. The fine radial point with cutting edges can be inserted into the smallest canals. Once screwed and anchored into the dentin, it allows enough leverage to sever the periodontal ligament along with the pulpal nerve tissue without more invasive surgeries. Passes through subgingival decay without removing important supportive bone and tissues. Crossed design handle allows turning without tearing gloves while maintaining enough grip to screw into the remaining root tip for easy retrieval, virtually impossible with any other instrument. Made from Titanium with surgical cutting edge that never requires sharpening. All have 6mm handles.

- Remove broken and residual root tips with ease
- Healing time is decreased due to reduced bone removal and trauma.
- Alveolar bone remains intact so the ridge is preserved

### HEMOSTASIS MATERIALS

#### Clot-It Vet
A revolutionary way to stop bleeding fast and keep it stopped. Single-dose triple-action application process results in complete clotting in seconds and stops bleeding completely within 45 seconds, 5 times faster than any other product on the market. Colorless, non-staining blood clotting powder made up of a multi-action compound of all-natural minerals rapidly stops bleeding in minor to severe external wounds.

Upon contact with blood, it facilitates and accelerates the body’s natural coagulation cascade, while simultaneously slowing blood flow, by constricting local vessels and capillaries. Fine granules create an iconic attraction between blood cells resulting in flocculation (clumping together) of these cells, and also rapidly absorb plasma at the wound site, leaving behind platelets and blood cells to aid in forming a solid clot. The most comprehensive, effective, and versatile platform of hemostatic products to be used in the veterinary Clinic. Available in non-sterile and sterile single-dose applications.

Intended for use in minor to severe external wounds, including:
- Skin tears, lacerations, grazes, cuts, sores and other skin integrity issues
- Injections, intravenous treatments, blood draws
- Dental procedures
- Tail docking and nail trimming
- Cutaneous ulcers
- Femoral arteries
- Hematomas
- Bleeding tumors
- Soft palate surgery

#### Retraction Cord Packers
- Extra thin heads at $45^\circ$ to the handle.
- Slightly serrated non-snagging edges around entire head.

<table>
<thead>
<tr>
<th>Code</th>
<th>Description</th>
<th>Price</th>
</tr>
</thead>
<tbody>
<tr>
<td>798</td>
<td>Retraction cord packer (regular)</td>
<td>$34.75</td>
</tr>
<tr>
<td>799</td>
<td>Retraction cord packer (small)</td>
<td>$34.75</td>
</tr>
</tbody>
</table>

#### Ultrapack/Ultrapack E Retraction Cord
Knitted into thousands of tiny loops that form long, interlocking chains, for quick retraction and easy placement. Exerts a gentle, continuous outward force following placement as the knitted loops seek to open. Holds significantly greater quantities of hemostatic solution than conventional cords. Ultrapack E is impregnated with epinephrine hydrochloride. Do not use with ferric sulfate solutions. Each bottle contains 8 feet.

- #000 Black. For anterior teeth.
- #00 Brown. For preparing and cementing veneers and restorative procedures with thin, friable tissues.
- #0 Purple. For lower anteriors and second cord for “two-cord” technique.
- #1 Blue. For protective “pre-preparation” cord on anteriors.
- #2 Green. For upper cord for “two cord” technique. Use as a protective “pre-preparation” cord on anteriors.
- #3 Red. For fairly thick gingival tissues where a significant amount of force is required. Upper cord for the “two-cord” technique.

#### Polyglycolic Acid Absorbable Suture
Synthetic absorbable braided suture material comparable to Vicryl. Unique calcium stearate coating ensures smooth tissue passage with minimal trauma to tissue. Precision braided construction provides secure knotting with excellent pliability and handling properties. Extremely strong retaining 60%-70% tensile strength at 14 days with rapid absorption rate between 60-90 days. 30” with size 2 reverse cutting needle.

#### Astringedent Coagulative Hemostatic Agent
For use in arresting various degrees of oral capillary bleeding or sulcular fluids during treatment and oral surgery including fixed prosthodontics, restorative-operative, periodontal treatment, retrofillings, impactions, gingivectomies and as a “fixative” for pulpotomies. An aqueous, 15.5% ferric sulfate hemostatic solution with a pH 1.0 stops bleeding in seconds. 30ml vial.
